ABSTRACT OF THE DISCLOSURE

To enable easy image file management, while allowing a user at an Internet terminal to access image files effortlessly, a printing control device uploads image files stored in an auxiliary storage section to an image management device connected via the Internet, and prints an image on the basis of the image file by means of a printer. In the printing control device, a URL acquisition section obtains a URL corresponding to a directory of the image management device on the basis of the input user ID; an image file transmission section uploads the image file to the acquired URL; and in a print processing section, it prints the acquired URL, along with an image based on the image file.
